

Managed Workplace Overview

Secure employee onboarding, access, devices, productivity tools, and workplace technology operations.

What Managed Workplace Covers

Managed Workplace helps standardize the employee technology lifecycle: onboarding, offboarding, identity and access, devices, productivity tools, collaboration platforms, workflow support, and security controls around the modern workplace.

Managed Workplace Components

Onboarding	User accounts, access groups, devices, productivity apps, and baseline security setup.	New hires start faster and with fewer access gaps.
Offboarding	Account disablement, access removal, device return, data preservation, and license cleanup.	Reduces data leakage and orphaned access.
Identity & Access	MFA, SSO, role-based access, and account lifecycle governance.	Protects business apps and cloud data.
Productivity Platforms	Microsoft 365, Google Workspace, Zoho, and related workplace tools.	Keeps daily operations stable and supported.
Device Support	Device standards, inventory, endpoint protection, and support coordination.	Improves reliability and security visibility.
Reporting	Workplace technology health, access posture, and lifecycle activity.	Gives leadership visibility into operational risk.

What This Is Not

- Not payroll administration
- Not employment law advice
- Not benefits administration
- Not HR investigations
- Not a replacement for company leadership decisions or legal review

Best Fit

Managed Workplace is best for businesses that have growing teams, inconsistent onboarding/offboarding, scattered SaaS tools, device sprawl, or concerns about employee access after role changes or departures.
