

ProActive IT & Security Ecosystem Overview

A cybersecurity-first managed IT model for stable operations, protected users, and strategic technology ownership.

What the ProActive Ecosystem Is

The ProActive Ecosystem is Digerati Experts' cybersecurity-first managed IT model. It is built for companies that want more than reactive support tickets. The model combines user support, secure access, device and workplace operations, backup, network/security controls, reporting, and strategic guidance depending on the level of coverage selected.

Coverage Levels

ProActive IT Ecosystem	Businesses that need core managed IT and security direction.	Foundational support, endpoint visibility, basic IT operations, and cybersecurity-first ownership.
ProActive Office Ecosystem	Teams that need secure workplace operations.	Users, devices, productivity platforms, managed network/connectivity, endpoint backup, and operational support.
ProActive Business Ecosystem	Companies that need stronger protection and leadership reporting.	Endpoint backup, BCDR, user cloud backup, security awareness, threat detection/SOC options, and business/security reviews.
ProActive Enterprise Ecosystem	Complex, multi-site, or compliance-driven organizations.	Advanced/custom security, compliance reporting, business continuity, quarterly planning, and audit-grade evidence.

Standalone Services vs. ProActive Ecosystem

Standalone services solve one clearly defined technology role. The ProActive Ecosystem is for broader IT/security ownership where Digerati Experts guides the overall stack, risk posture, and operating model.

Common Add-On Areas

- UCaaS voice and meetings

- Co-managed IT support for internal teams
- Compliance reports and evidence collection
- Security awareness training
- Network and secure access modernization
- Backup and BCDR expansion

Assessment-Based Pricing Note

Public pricing should be treated as starting-at guidance. Final pricing depends on users, endpoints, sites, compliance requirements, backup scope, existing technology condition, and selected add-ons.
