

ProActive Enterprise Ecosystem Datasheet

Advanced managed IT, security, compliance, reporting, and multi-site technology governance for organizations that require a more mature operating model.

ProActive Enterprise Ecosystem is the most complete Digerati Experts package. It is designed for organizations with higher operational risk, multiple locations, advanced security posture needs, compliance expectations, or executive-level reporting requirements. Enterprise includes quarterly strategy cadence and custom backup, BCDR, security, and compliance maturity planning.

Best fit	Organizations with compliance requirements, multiple sites, high downtime sensitivity, complex access needs, or executive reporting expectations.
Primary outcome	A mature IT/security governance model with quarterly planning, audit-grade reporting, advanced backup/BCDR, and full unified security posture.
Engagement type	Advanced/custom managed IT and security ecosystem. Enterprise requires compliance or advanced governance need.

What this package is for

- Building a mature technology and security program around business risk.
- Supporting multiple sites, advanced controls, security posture visibility, and executive reporting.
- Creating structured evidence, planning, and governance for leadership and compliance conversations.

Included focus areas

- Advanced/custom backup and BCDR program.
- Threat Detection and SOC/security operations included.
- Full unified security posture program.
- Audit-grade compliance reporting and security business review cadence.

Strategy cadence and governance

- Quarterly technology business reviews and security business reviews.
- Executive roadmap tied to risk, compliance, budget, lifecycle, and operational resilience.
- Quarterly review model can include security trends, incident summaries, risk register updates, backup readiness, project status, and roadmap decisions.

Scope drivers

- Compliance requirements, multi-site design, secure access architecture, data protection needs, and reporting maturity drive final scope.
- Network solutions are required for multiple-site environments.
- Company spend-card lifecycle controls and advanced workplace controls are included or customized as part of the broader governance model.

Typical deliverables

- Quarterly business/security reviews
- Audit-grade reporting package
- Unified security posture summary
- Advanced backup/BCDR roadmap
- Multi-site network and secure access roadmap

Next step

Schedule a Cyber Risk Assessment to confirm the right service level, required controls, and implementation roadmap.

Note: This draft is written for Digerati Experts public resource use. It avoids customer names, logos, and vendor-specific claims. Final service scope depends on assessment results, user count, endpoints, sites, compliance needs, backup scope, and selected add-ons.
